

SYSTEM AND COMPUTER READABLE MEDIUM FOR ACCESSING PROGRAM CONTENT INFORMATION AND METHOD THEREOF

ABSTRACT OF THE DISCLOSURE

Systems and a method are provided for accessing and providing information related to a particular multimedia program. A user provides a request for program content information, including a time and a channel associated with a program of interest. The time and channel are provided to a program guide to access a title associated with the particular program. The title is provided to an Internet-based information database to receive program content information related to the provided title. A portion of the program content information is presented on a display along with the program itself. The user may select a level of detail associated with the program content information to be displayed along with program content.
